Rabbits
200+

A USA Non Profit Opportunity That Feeds Malnourished Children . . .

Rabbits Feeding Suffering Children

*We are feeding
superfoods to children
using sustainable, organic
rabbit excrement!*

Global Food Providers has perfected the organic rabbit tea method of feeding our superfood plants, reducing our need for commercial fertilizers and saving lots of money growing food.

Over the last four years, Global Food Providers has been utilizing rabbit excrement to create organic "rabbit tea" which is injected into the fertilizer lines at the farm and dehydration center. This results in happy, living soil and plants. "It's the greatest sustainable project we have on the farm." Says, Dr. Daniel Daves, President of Global Food Providers.

It's Time To Multiply!

Our Bunnies Are Naturally Multiplying Like Rabbits! It's Time to Maximize Their Power.

We currently have 50+ rabbits and are expanding to 200+ rabbits in order to provide more children with superfoods. We will also provide poor families with organic fertilizer to help them grow their family crops so they can feed themselves.

"Right now our 6,000 meter greenhouse farm operates on a combination of rabbit poop, chicken poop, and compost. With

more rabbits, we are **Two Hundred Rabbits** able to create a lot of **Will Produce 200 lbs.** organic plant food that **Of Poop and 120+ Gals.** will help us feed the **Of High Nutrient Urine** poor." Says Dr. Daves. **Fertilizer Per Week!** As we expand to 200+ rabbits, we will be 100%

100% off grid from commercial fertilizers. This reduces our risk while commercial farmers are suffering with 300% - 400% higher fertilizer prices. We will produce everything that our farm needs, including extra to help poor local families who are trying to grow their own food supplies at home.

Would you consider fulfilling all or part of this program grant so we can expand our feeding capacity?

*Your gift maximizes sustainable feeding of children suffering with malnutrition.

*You help us to create a fertilizer program that will continue to produce year after year with minimal input. With this fertilizer, we will create more super food bio mass that we can

Dehydrate and give to the poor. We will continue to be fully off grid from the commercial fertilizer companies, and we will help poor families to grow their gardens with organic compost.

Global Food Providers/Children's Feeding Network Prototype Farm & Dehydration Center Potrerillos, Chiriqui, Panama

Rabbit Multiplication Project Two Hundred - 2024

Total Project Cost:

\$14,700

**Includes completed 900 sf metal building, plumbed, electric, auto feeders, 54 rabbit cages, special "in ground" breeding cages, infirmary room, pumps, injectors and motors to move fertilizer throughout the farm. Also includes a year's supply of rabbit mineral pellets to keep the rabbits well feed and healthy.*

This Program Will Increase Annual Fertilizer Production:

10,400 lbs. expanded active solid rabbit fertilizer annually which will mix with compost and chicken poop for an all-inclusive, sustainable plant food to be used on our farm and given to extremely poor families.

6,240 gallons of organic rabbit urine liquid fertilizer, used as sprayable insecticide, root stimulator and organic bio soil feed.

Estimated Annual Plant Bio Mass Increase On Our Farm: 51,480 lbs increased superfoods grown in our greenhouse, fertilized by this Rabbit fertilizer program.

(9 greenhouses, 110 lbs expanded superfood production per greenhouse, 990 lbs per week.)

(536 bags of 6oz dehydrated superfoods per year)

(Approximately 20,000 lbs of sustainable compost created for donation to extremely poor families. 400 - 50 lb bags)

You can give the following ways:

Corporate or personal check sent to: Children's Feeding Network, P.O. Box 179, Mansfield, TX 76063

Donate by credit card by scanning the QR code.

Go to <https://globalfoodproviders.com/pages/donate> and choose any amount to donate, including the full rabbit program.
